

⇒ { SpringConfigServer
CircuitBreaker (m-s) }

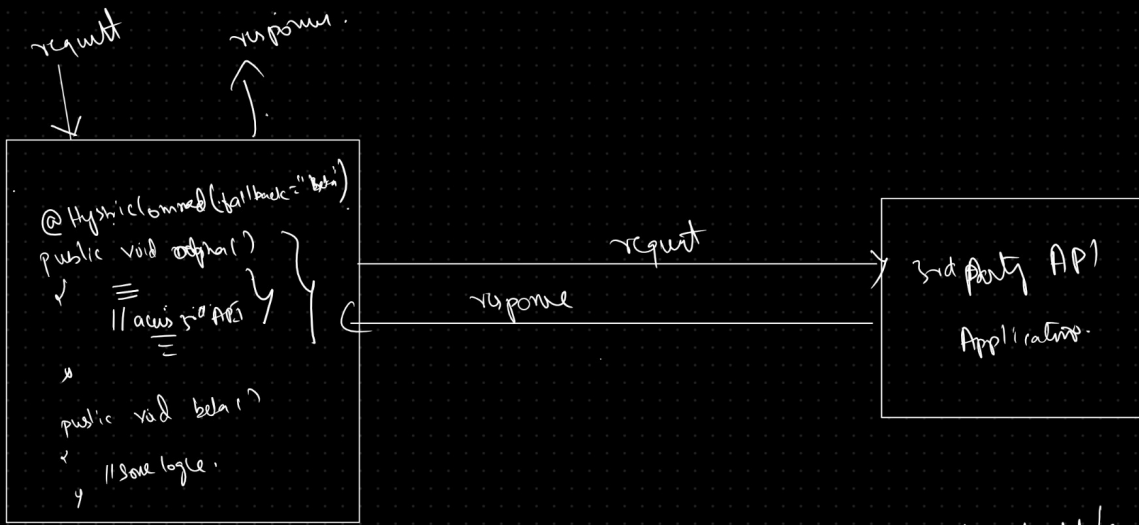

⇒ ConfigServer :-

Circuit Breaker ⇒ Method to protect us from Damage

Service 1 interacts with service 2 & service 2 interacts with service 3
If service 2 fails then our app will fail, so to resolve this problem we use "Circuit Breaker"

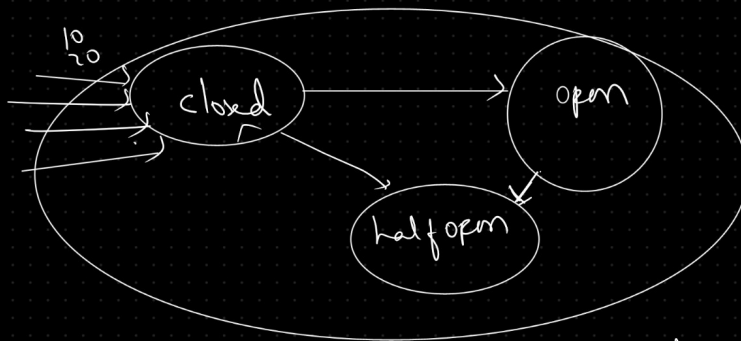

⇒ If alpha() failed in processing the request, then request should be proceed to beta()

To achieve this CircuitBreaker

Monday

~ Circuit Breaker Pattern :-

~ Retry pattern

⇒ { Circuit Breaker Pattern
@CircuitBreaker

Retry Pattern
@Retry
